RECORDS OF SOME SCARABS FROM IDAHO (COLEOPTERA: SCARABAEIDAE)

GARY A. SHOOK

1209 W. Hays St., Boise, ID 83702

On May 8, 1976, D. C. Shook collected a male and a female of *Liatongus californicus* (Horn) on sagebrush-covered foothills 5 mi. NE of Boise, Ada Co., Idaho. I collected an additional female on May 1, 1977, 4.5 mi. NE of Boise. Hatch (1971), who referred *L. californicus* to the genus *Oniticellus*, reported the only Pacific Northwest locale as extreme southern Oregon east of the Cascades. Specimens in the U.S. National Museum represent only Oregon and Utah. The 3 beetles noted above have been deposited in the USNM.

I collected a male of *Trox scaber* (L.) on June 1, 1974, at a blacklight in Boise. On June 11, 1977, I took a female of *Omorgus suberosus* (Fabr.) from next to a sheep carcass 7 mi. NE of Richfield, Lincoln Co., Idaho. Neither species was recorded from Idaho by Vaurie (1955) or Baker (1968).

My thanks to Oscar L. Cartwright for verifying my identification of the *Liatongus* and for related information. Also, I thank Charles W. Baker for confirming my identification of the *Trox* and *Omorgus*, for determining their sexes, and for other assistance.
